Practice : Digital Textbooks at School

More schools are using digital textbooks on tablets instead of traditional printed books. Students can use them in many subjects, and some schools are trying to increase their use in class.

There are several advantages to digital textbooks. Students can watch videos and listen to audio to help them understand difficult topics. Also, the information in digital textbooks can be updated easily, so students can learn from newer information without buying new books.

However, digital textbooks also have some disadvantages. Looking at screens for a long time may make students tired and make it difficult for them to concentrate. In addition, if tablets have technical problems or run out of power, students may not be able to use their textbooks during class.
